Rectangular/circular slit

D
A simple rectangular or circular slit. You may either
specify the radius (circular shape), or the rectangular bounds.
No transmission around the slit is allowed.

Example: Slit(xmin=-0.01, xmax=0.01, ymin=-0.01, ymax=0.01)
Slit(xwidth=0.02, yheight=0.02)
Slit(radius=0.01)

The Slit will issue a warning if run as "closed"

☐ Verbose
